INFORMED CONSENT: INFLUENZA VACCINATION 2020/2021

Before agreeing to receive the flu vaccine, please:

- Take time to answer the following questions.
- Take time to read the CDC handout that is available and should be kept by you.
- If you have any questions, talk to your doctor or the person administering your shot. The information you provide is private and confidential and will not be used for any other purpose.
- If you have any major medical conditions, please discuss and obtain advice from your treating doctor.

	YES	NO
1 Did you experience any significant problems after previous flu vaccinations?		
2 Are you ill at the moment? Do you have a fever greater than 100.4?		
3 Are you allergic to eggs, chicken feathers or any egg products?		
4 Have you been diagnosed with Guillain-Barre Syndrome in the past?		

After your flu shot:

- The flu vaccine is generally well-tolerated.
- Like all medicines, vaccines may have side-effects. Some redness, tenderness, discomfort or swelling is common at the injection site, but this usually settles within a few days.
- Some people have a slight fever, muscle pains and generally feel a bit unwell for a few days after vaccination. These 'flu-like symptoms' do not mean they have the flu.
- Guillain-Barre Syndrome is rarely associated with influenza vaccination (1 in 2 million), although a direct relationship has not been established.

I have read and understand this information from the CDC. I give consent to LSU Healthcare Network to vaccinate me for the influenza virus.
